

REDSKY CODING CHALLENGE

EXPECTATIONS:

CREATE A FRONTEND

(Svelte / Typescript / Tailwind for css)

- This will need to speak to your backend and retrieve a list of users
- Should render a list of users
- Provide some relevant detail for each user
- Provide ability to create, update, and delete a user
- No pagination, sorting or filtering is required
- Display a toast for actions and results

CREATE A BACKEND

(Typescript NodeJS (with Express))

- Write an integration to <https://reqres.in/> to pull an initial listing of users
- Even though reqres provides an update and delete functionality, we want you to cache the initial list of users from the first pull and modify according to frontend requests in the NodeJs memory (no persistent caching is required).
- Will need create, read, update, and delete methods
 - Preferably on different endpoints

OPTIONAL

Anything else you can think of to add, feel free to do so.

🕒 Record the time it takes for you to work on this task and report back 🕒

FEEL FREE TO ASK QUESTIONS BY EMAILING: ALEX@REDSKYTECH.IO
